Full-Stack Software Development Engineer with 4+ years of experience designing and delivering scalable backend systems, AI-powered agents, and cloud-native applications using Java, Python, Node.js, and TypeScript. Proven expertise in Generative AI, LLM integration, RAG pipelines, prompt engineering, and microservices architecture. Delivers measurable impact across 80+ enterprise organizations in Agile/Scrum environments.

TECHNICAL SKILLS

Programming Languages: Javascript, Python, Java, SQL, TypeScript

Backend Frameworks: NodeJS, Fast API, Flask, Spring Boot, Rest APIs, Microservices, Distributed Systems, LangChain, LangGraph, GraphQL

Frontend Frameworks: Angular, Flutter, React, NextJS, Tailwind CSS

Databases: PostgreSQL, MariaDB, MongoDB, FAISS, Chroma DB, Pinecone, pgvector

DevOps: Jenkins Pipelines, Docker, Ansible, Kubernetes, Nginx, Caddy, GCP, AWS, CI/CD, System Design, Terraform, Azure

Tools: Redis, RAG Pipelines, Elasticsearch(ELK), Grafana, Solar Wind, Generative AI, Linux, MCP, Agents, LLM, OpenAI API, Hugging Face, Prompt Engineering, LLMOps

WORK EXPERIENCE

Software Development Engineer - 2

PeopleStrong, Gurugram, Haryana

Jan 2022 – Present

- Architected a scalable FastAPI backend and LangChain orchestration for an AI feedback agent used by 80+ organizations. Integrated PostgreSQL and Retrieval-Augmented Generation (RAG) to automate insight generation from MS Teams and Outlook, reducing manual review time by 40%.
- Developed MCP-based agents, including a Leave Agent that retrieves leave information and automates leave applications, and a Performance Agent that retrieves performance data, enables goal creation, and monitors goal progress to support continuous performance management and evaluation.
- Developed an AI-powered co-recruiter that integrates with Microsoft Teams to extract interview transcripts and recordings. Leveraged semantic search and Retrieval-Augmented Generation (RAG) to analyze candidate responses and generate structured, job-description-based evaluations, enabling efficient, data-driven hiring decisions and improving recruiter productivity.
- Worked as an Individual Contributor on the complete revamp of the Goal Management and Performance Review module using custom workflows. Transitioned the product from fixed roles to configurable roles by developing Spring and Node.js APIs and Flutter-based UI, enabling flexible workflow configurations and improving performance management capabilities for over 80+ organizations.
- Collaborated with the Flutter revamp team to design and develop the Leave and Performance Management modules from scratch implementing Role-Based Access Controls (RBAC), delivering scalable, user-friendly interfaces and ensuring seamless integration with backend systems to enhance overall HR workflow efficiency and user experience.

PROJECTS

- **AI-Tutor - (ReactJs, Langchain, Flask, Redis, Queues)**- Developed an AI-powered tutor that ingests PDFs and topics, converts content into vector embeddings, and performs semantic search to retrieve relevant context for LLM-based responses. Implemented asynchronous processing using a Bull queue to break, store, and efficiently serve responses to the frontend, ensuring scalable and responsive user. [GitHub](#) [Try it!](#)
- **AI-News - (Flutter, Langchain, Flask)**- Developed an AI-powered news parser that scrapes news websites and uses Retrieval-Augmented Generation (RAG) to extract and summarize relevant news with high precision in 60 words. Enabled accurate, concise, and context-aware summaries to help users quickly consume important information from large volumes of news content.
- **Ruby AI - (Flutter, NodeJS, PostgreSQL)**- Developed the Ruby AI mobile application to assist doctors in transcribing patient appointments and generating structured SOAP summaries. Enabled AI-driven suggestions for diagnosis, medications, and lab tests, and supported voice-based medication dictation to automatically generate prescriptions, significantly reducing manual effort and improving clinical documentation efficiency. [Try it!](#)
- **Ruby RX - (Flutter, NodeJS, PostgreSQL)**- The application integrates with Ruby AI to digitally manage patient prescriptions by tracking potential drug-drug interactions and ensuring medication safety. It leverages Google Vision to accurately read both typed and handwritten prescriptions, converting them into structured digital records, improving accuracy, accessibility, and overall prescription management efficiency. [Try it!](#)

EDUCATION

Birla Institute Of Technology Mesra

Bachelors of Technology

Ranchi, Jharkhand

July 2018 – June 2022
